

- b. a second polymer [comprised substantially of] consisting essentially of a copolymer of conjugated diene units or a copolymer [comprised substantially of] consisting essentially of conjugated diene units and vinyl aromatic units, and further including at least one nitrogen containing terminal group.
2. (Three Times Amended) A composition according to claim 1, wherein compounds comprising said carboxylic acid or said anhydride pendant or terminal functional group comprises succinic acid or succinic anhydride.
7. (Three Times Amended) A composition according to claim 1, wherein said second polymer comprises [polybutadiene] butadiene units.
9. (Three Times Amended) A composition according to claim 7, wherein said [polybutadiene] butadiene units comprise at least 40 weight percent of said second polymer.
10. (Three Times Amended) A composition according to claim 1, wherein at least 80 weight percent of the first polymer is derived from the polymerization of propylene and/or ethylene, and said at least one carboxylic acid [group] or said at least one anhydride of said first polymer is derived from maleic acid or maleic anhydride, and  
at least 50 weight percent of said second polymer is comprised of said [C<sub>4</sub>-C<sub>8</sub>] polymer of conjugated diene units.
21. (Amended) A [reaction product] composition comprising the reaction product of [a blend of] a maleated polypropylene and amine terminated polybutadiene.

Please cancel claims 5, 11, and 12 without prejudice or disclaimer.
